Dear Hiring Manager,

I am writing to express my interest in the Software Engineer, Frontend position at Coinbase. With extensive hands-on experience building and refining web applications using React and Node.js, I am eager to contribute my skills to a company dedicated to transforming the financial landscape through innovative technology.

At Ford, I developed additional features and fixed bugs for the existing Amazon Alexa functionality within infotainment systems, ensuring a smoother user experience. At General Motors, I contributed to the ongoing maintenance and minor improvements of network features, including work related to telemetry data visualization. In addition, during my time at D2L, I built a React-based status page to monitor internal systems using AWS services, further honing my expertise in responsive, data-driven interfaces.

I am driven by a commitment to delivering practical, reliable solutions and thrive on tackling challenging problems. I value the opportunity to learn and grow alongside talented professionals, and I believe my experience aligns well with Coinbase's mission and fast-paced work culture.

Thank you for considering my application. I look forward to discussing how I can contribute to the continued success of Coinbase.

Sincerely,

Farhan Hossein
